Standard Interpretation for S-N Values

Less than 0.100 Open
0.100 – 0.250 Preg-Recheck
More than 0.250 Pregnant

Individual animal results vary
Values do not measure days of
pregnancy

ELISA pregnancy analysis is best between 28-45 days carried calf (DCC) and 65 DCC thru dry-off. PAG levels for *all* cows drop between 45-65 DCC, so all cows diagnosed as open or preg-recheck during 45-65 DCC should be rechecked.

Please remember to record all “pregnant”, “open”, and “recheck” results in your DHIA records!
